

Special Issue

Healthcare Work and the Role of Clients in Change

Message from the Guest Editor

Healthcare worldwide is facing several challenges which impact the working life and operational environment in the sector and also affects the role of clients. Aging population and workforce in many countries, multiculturalism, and digitalization, accompanied with disparities between needs for services and available resources, will challenge established knowledge and practices and request renewed expertise and approaches.

This Special Issue in the International Journal of Environmental Research and Public Health is devoted to new research related to these topics which on the one hand challenge the healthcare sector worldwide but on the other hand offer solutions to arrange healthcare in new and perhaps more efficient ways.

A wide range of topics will be included in this issue related to challenges and opportunities of contemporary healthcare in a world that is getting increasingly digital, multicultural, and global, as well as influenced by the use of social media.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
