

Special Issue

Healthy Farming and Environmental Pollution

Message from the Guest Editors

This Special Issue will be devoted to healthy farming and environmental pollution. We call for papers focused on the state of the science in the prediction of health farming, livestock waste treatment, health impacts, risk assessment and pollution control and management strategies. The livestock and poultry breeding industry is an important part of agriculture, which not only guarantees the demand of people all over the world for livestock and poultry products but is also the pillar industry of the agricultural economy in many countries. As a contradiction between the production and consumption demand of livestock and poultry products, the protection of breeding land and cultivated land, livestock waste pollution and ecological environment maintenance have become increasingly serious, and healthy farming has become an urgent matter in the development of animal husbandry globally. The production of livestock waste is huge, which poses a great threat to the environment, and can cause atmospheric odor pollution, water pollution, soil pollution and biological pollution.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
