

Special Issue

Human Health and Environmental Exposure Assessment

Message from the Guest Editor

This Special Issue is intended to provide an opportunity for the research community to publish valuable results from assessments describing cumulative effects from exposure to combinations of chemical and non-chemical stressors on chronic disease outcomes. Manuscripts describing models that support new approaches for conducting cumulative risk assessments towards assessing the impacts of multiple, interactive, and cumulative exposures from the environment on adverse personal health events and population-level health disparities are encouraged. The overarching theme of Human Health and Environmental Exposure Assessment should be at the center of these manuscripts. Reviews, research articles, methodological studies, and papers concerning relevant policies and regulations are solicited. Please provide an abstract beforehand so we can confirm its suitability to the intended theme. We look forward to receiving your submissions.

Guest Editor

Dr. Darryl B. Hood

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
