Intellectually and Developmentally Disabled Children and Adults: Assessment and Treatment

Message from the Guest Editors

The phenomenon of intellectual and developmental disabilities is complex and heterogeneous. In recent years, diagnostic and treatment systems of IDD have emphasized the supports that people with IDD require to adequately function in their communities and to achieve their fullest potential. Many efforts have been endeavored to develop accurate, valid and reliable assessment and diagnostic instruments, as well as to design and apply efficient and evidence-based treatment strategies, policies and programs. However, there are still many research gaps around issues such as the psychometric adequacy of assessment and diagnostic systems, what are the most useful strategies for determining the effectiveness of treatment programs, the prevalence of dual diagnosis, the most effective ways of dealing with conduct disorders or challenging behaviors, how to properly diagnose psychiatric disorders in this population, or how to assess and implement support systems, among others. We invite researchers to send their works on the above mentioned topics, to be considered for publication in this Special Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
