Initiatives toward Suicide and Self-Harm Prevention: Addressing the Global Imperative

Message from the Guest Editors

Suicidal behaviour presents a significant health burden globally, with increasing efforts around the world now focussed on suicide prevention. However, not all initiatives are evidence based or effective. Given the scope, severity, and consistency of the problem of suicide, evidence-based approaches in suicide prevention are vital for an effective impact on a population level, and single intervention approaches are not sufficient.

To that end, we invite your submission to this Special Issue entitled “Suicide Prevention Strategies: Looking toward the Future”, targeted at the highest-quality research and reviews addressing all relevant aspects. Submissions can include systematic reviews, or original and experimental manuscripts that provide evidence to strengthen the global knowledge base in effective suicide prevention strategies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
