

Special Issue

Research on Informal Caregivers

Message from the Guest Editor

A Special Issue on research on informal caregivers in the *International Journal of Environmental Research and Public Health* is being organized. For detailed information on the journal, I refer you to <https://www.mdpi.com/journal/ijerph>. As the world's population is aging, nearly every country across the globe is experiencing growth in the number of older adults. Population aging has profound and long-term impacts on almost every aspect of society, including the provision of care to older adults living with chronic conditions, disabilities, and cognitive decline. Informal caregivers or carers, such as family or friends providing unpaid care, represent a major source of care in nearly every country. Although informal caregiving is a critical component of long-term care, substantial physical, psychological, and social burdens are associated with this role. Developing strategies for reducing these physical, psychological, and social burdens associated with caregiving is vital to maintain this critical component of health care and support the hundreds of millions of informal caregivers across the globe.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
