

Special Issue

Assessment Instruments in Health Psychology and Psychological Wellbeing

Message from the Guest Editors

This Special Issue focuses on methodological works aimed at studying the psychometric properties of tests related to the areas of Health Psychology and Psychological Wellbeing, as well as measurement invariance between countries or between groups of people. Likewise, we hope to receive contributions on qualitative and quantitative approaches for the assessment of constructs and studies of item bias when adapting tests and questionnaires, using complex statistical procedures such as item response theory, structural equation modeling, generalizability theory and others. Theoretical articles, simulation studies, empirical works and reviews of the state of the art in Psychometrics, specially focusing in any area of Health and Psychological Wellbeing assessment and/or considering new perspectives in the study of test translation and adaptation are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
