

Special Issue

Global Health and Research Advances in Internet Addiction Disorders

Message from the Guest Editor

Media use is a major source of information, relatedness and entertainment. However, for some users it can lead to loss of control, distress and functional impairment. The magnitude of maladaptive use of Internet and related social, psychological and physical health issues has reached the magnitude of a public health issue worldwide. Compiling public health and research data on advances worldwide in tackling Internet-related disorders can serve as benchmarking for jurisdictions where response is still lacking or where it is in its early stages. These compiled datasets can help said jurisdictions in designing adapted and evidence-based national responses, inspired by existing models and examples and benefiting from data compiled from effective approaches. Papers on national case studies, meta-analyses, treatment responses, new technologies, innovative interventions, quality approaches, efficacy assessment, health system preparedness or prevention strategies against Internet-related disorders are welcomed in the current Special Issue. Contributions can include clinical populations, gender-related issues, and all age groups, including youth and seniors.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
