

Special Issue

Internet Based Obesity Prevention in the Time of COVID-19

Message from the Guest Editor

Approximately two billion people worldwide are either overweight or obese. The efficacy of treatment for these issues is limited, and the reduction in rates of obesity is of insufficient speed to meet Sustainable Development Goal (SDG) 3 regarding improvements in health and well-being by 2030. The COVID-19 pandemic has exacerbated the issue of obesity and the effects will be more profound in years to come. Prevention of obesity should be given priority in public health agenda and online tools have been proven to amplify any preventative interventions. This Special Issue will examine evidence for use of the internet in obesity prevention during the COVID-19 pandemic.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
