Universal Health Coverage—for a Globally Accessible and Affordable Health Care Service

Message from the Guest Editor

One of the current challenges worldwide is the SDG 3 – Healthy lives and well-being for all. One way that contributes to the achievement of this goal is the development of health systems sustaining the principle Universal Health Coverage (UHC) for the population. Investing and providing UHC implies producing health services (preventive, promotive, curative, rehabilitative and palliative) in the quantity and quality for people in an equitable ground, protecting them from financial hardship. After the COVID-19 pandemic, it became clear that strengthening health systems towards sustainability and resilience was key to promote and move towards UHC. This Special Issue of International Journal of Environmental Research and Public Health (IJERPH) focuses on all these different systems and factors that contribute to the achievement of UHC and health for all. The topics covered in this special include health systems, health insurance, pharmaceutical systems, innovation, and financing, among other topics related with the development of UHC worldwide.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
