Physiotherapy and Ergonomics to Prevent Work-Related Musculoskeletal Disorders

Message from the Guest Editors

Work-related musculoskeletal disorders (MSDs) are common worldwide, affecting the productivity, workability, and quality of life of workers from several economic sectors and countries. The multidetermined nature of MSDs is a challenge for researchers and professionals since risk factors require different approaches. Evidence-based strategies to control and prevent MSDs are desirable and necessary to guide physiotherapists and ergonomist practice. Moreover, implementation processes and research agendas are also needed. This Special Issue of *IJERPH* will focus on “Physiotherapy and Ergonomics to Control and Prevent MSDs”. Investigators from these areas are kindly invited to contribute for this Special Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
