

Special Issue

Hazardous Contaminants in Air, Soil and Water: Dynamics and Interactions with Different Components of Biota

Message from the Guest Editor

The presence of hazardous contaminants, defined as any dangerous substance or compound undesirable for living beings in the environment, is a growing global concern for all environmental compartments. Their appearance and persistence in air, soil and water can negatively impact biota and lead to a decrease in quality and overall environmental health. For this Special Issue, different types of papers (articles, reviews, communication, etc.) able to expand the knowledge on this topic at regional, national or world levels are welcome.

Guest Editor

Dr. Anna De Marco

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
