Promoting Mentation: Assessment and Support for Dementia, Depression and Delirium

Message from the Guest Editors

Cognitive and emotional health have long been recognized as essential dimensions of overall quality of life and well-being, particularly among elders. A focus on mentation has brought attention to all aspects of the function and well-being of a person's mind, including a goal of identifying and treating dementia, depression, and delirium. For this Special Issue, we invite articles focusing on each of these three conditions from both a clinical and community-based public health perspective. Across the conditions of dementia, depression, and delirium, this Special Issue seeks to provide the latest insights in evidence-based clinical practice, including assessment, early detection, and care, as well as innovative efforts to educate primary care providers to increase their competency in geriatrics. Furthermore, we will explore community-based models associated with the education, care, and support of people living with dementia, depression, and delirium, as well as their care partners. We will also include papers relating to community-based participatory research to affect positive community change to support the well-being of adults experiencing limitations in mentation.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
