

## Special Issue

# The Impact of Internet and Social Media Use on Young People's Mental Health

### Message from the Guest Editors

The digital era has had a tremendous influence on adolescents and young people. People no longer distinguish their experience with the old categories: offline vs. online. Digital reality is the new reality. This equivalence affects psychological development, and this is a risk and vulnerability factor, with extreme potential consequences such as suicide or interpersonal violence. This Special Issue of *IJERPH* welcomes scientific contributions which help to understand contemporary phenomena related to internet use in the adolescent mind. Studies may focus on aspects related to the self (identity, body image, ability to regulate emotions, metacognitive skills, coping, addictions, personality traits, etc.) as well as relational aspects (parasocial interactions, phubbing, sexting, ghosting, cyberviolence, etc.). These topics deserve further study, which should address the conceptualization of new phenomena and their possible prevention in terms of psychological and public health risks.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
