

Special Issue

Inequities in Health and Well-Being

Message from the Guest Editors

The COVID-19 pandemic further exacerbated existing health inequities and created new ones, particularly in access to healthcare, digital exclusion, and the disproportionate impact on certain at-risk groups. Understanding and addressing health inequity is widely acknowledged as a global health research priority. Research on health equity has been shaped by multiple disciplines and varying methodological approaches, and as such, the scope of this special edition is intentionally broad. In addition to welcoming research aiming to better understand or address inequities in health and well-being, we are also interested in including health equity methodological research (e.g., frameworks or theory development) to support the advancement of research in this field. We will consider all quantitative or qualitative research study designs to include evidence synthesis reviews, intervention studies, observational studies, consensus method studies, qualitative interview studies, or surveys.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
