

Special Issue

2nd Edition: Approach to Promoting Oral Health

Message from the Guest Editor

As oral health issues impair quality of life and have a negative impact on the well-being of people, oral health has become one of the important indicators for assessing health status. Oral health is closely related to our systemic health and physical strength, while it has also been reported to relate to emotion, mentality, and cognitive ability. In particular, the oral health of the population suffering health disparities and from inequality is much poorer, requiring us to launch a more vigorous search for solutions. This Special Issue focuses on multidisciplinary approaches and integrated care to address oral health issues, specifically for various population groups suffering from oral health disparities and inequities. We kindly invite you to submit original research articles, care reports, and reviews. All kinds of submissions will be welcomed to deal with diverse oral health issues, as well as those regarding the keywords presented below.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
