

Special Issue

Lifestyle, Gender and Cancers

Message from the Guest Editors

Cancer represents the second leading cause of mortality, and its incidence is steadily increasing worldwide. Both genetic background and modifiable environmental/lifestyle factors account for cancer etiology. Among them, overweight/obesity, junk food intake, and physical inactivity play a pivotal role. Moreover, gender is recognized as a major factor controlling incidence, therapeutic responses, and mortality of several cancers. We invite authors to submit both original research articles and review articles that cover recent research advances in the understanding of the links between life style, gender, and cancers. About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
