

Special Issue

Closing the Health Gap for Rural and Remote Communities

Message from the Guest Editors

The evidence base regarding rural and remote health requires substantial expansion, particularly through the lenses of intersectionality and system entanglement. Our current paradigm examining health determinants in isolation neglects the complex interplay of environmental, social, and economic factors that shape rural health outcomes. The rural context demands particular attention as environmental stressors escalate due to climate change, population dynamics, and economic transitions. We invite researchers and practitioners to contribute to this vital discourse, recognizing that closing the health gap for rural and remote communities requires a fundamental reimagining of how we conceptualize, monitor, and address environmental determinants of health. Our hope is that this Special Issue will catalyze innovative approaches that recognize the inseparability of environmental quality, health outcomes, and social justice in rural settings.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
