Special Issue

Land System – Ecological Process Interactions

Message from the Guest Editors

The utilization of land resources is a process which profoundly changes the natural environment. It is not only an important part of global change, but also an important factor driving global change. Therefore, the impact of land system changes on the ecosystem and environment, as well as their response to land changes. are important issues in the academic community. Land systems include not only the natural complex including geology, landform, climate, hydrology, soil, vegetation, etc., but also the impact of past and current human activities on the natural environment. As a typical complex system, land reflects the multifaceted interactions between human social and economic activities and biogeochemical processes. This Special Issue of International Journal of Environmental Research and Public Health (IJERPH) focuses on the current state of knowledge on the interactions between land system and ecological process. New research papers, case reports, and reviews of advances in methods, applications, and evidence are welcome to this Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
