

Special Issue

Factors Associated with Intimate Partner Violence Perpetration and Victimisation

Message from the Guest Editors

In this Special Issue of the *IJERPH*, we are particularly interested in original or review articles exploring factors associated with intimate partner violence perpetration and/or victimisation. We strongly encourage articles with a particular focus on the following areas:

- Psychological and childhood-related variables (e.g., child maltreatment and adverse childhood experiences) associated with intimate partner violence perpetration
- Factors associated with outcomes for victims-survivors of intimate partner violence (e.g., resilience, safe housing, and family violence service provision and accessibility);
- Intimate partner violence victimisation of perinatal women, men, or diverse sexual and gender identities
- Socio-ecological factors associated with intimate partner violence perpetration and/or victimisation

We intend to achieve an updated and comprehensive picture of the factors that predict intimate partner violence perpetration and influence outcomes for victims-survivors that will guide prevention and intervention efforts to reduce the prevalence of intimate partner violence and improve outcomes for victims-survivors.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
