# **Special Issue**

# Lifestyle Factors and Chronic Diseases

# Message from the Guest Editors

Chronic diseases (including cancer, cardiovascular disease, chronic respiratory disease, diabetes, and so on) are the leading cause of disability-adjusted life years and responsible for more than two-thirds of death worldwide. Unhealthy and modifiable lifestyle factors such as cigarette smoking, alcohol drinking, unhealthy diet, and physical inactivity are very important to investigate to reduce the burden of chronic diseases. It is also important to understand the different socioeconomic factors that may modify associations between lifestyle factors and chronic diseases, highlighting the groups that need to be focused on further. In this Special Issue, we look forward to receiving original research studies (longitudinal, casecontrol, randomized control trials, mixed-methods. meta-analyses) focused on the impact of lifestyle factors on the incidence and progression of chronic diseases.

# **About the Journal**

# Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

## Editor-in-Chief

Prof. Dr. Paul R. Ward
