

Special Issue

Musculoskeletal Disorders

Message from the Guest Editor

Different kinds of musculoskeletal disorders (MSD) have a serious impact on the health of the world's population. Despite the vast amount of research on the management of chronic non-specific or "mechanical" low back pain and neck pain, yet the etiology and pathomechanics of these disorders are still not fully understood.

This Special Issue on "Musculoskeletal Disorders" aims to attract high-quality research papers on the etiology, assessment, treatment and health promotion strategies for MSD. Research studies on neck and back pain, as well as upper and lower limb MSD are all within the scope of this Special Issue. We hope to receive a wide range of submissions including research on the physical, psychosocial, environmental and occupational perspectives. Study design can include case-control, cohort studies, clinical trials and field research. Systematic reviews on important issues related to MSD are also welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
