Special Issue

Workplace Interventions for the Prevention or Amelioration of Musculoskeletal Problems in the Working Population

Message from the Guest Editor

Musculoskeletal problems in the working population are known to be associated with sick leave, impaired work ability and early retirement. While many interventions. policies and guidelines have been developed for the amelioration of these problems, the global burden remains high and in some countries is increasing. The nature of work and the work environment is changing. In this Issue, we wish to promote the current evidence for the relationship between the performance of work, and/or the work environment for musculoskeletal symptoms or disorders. Studies, in particular longitudinal prospective studies investigating workplace-based interventions to ameliorate musculoskeletal symptoms/diseases/disorders for the prevention or amelioration of musculoskeletal problems. are welcome. Researchers are invited to contribute novel work to be considered for publication in this Special Issue. Submissions should include original articles, brief reports, or short communications. Critical reviews (systematic reviews, meta-analyses, scoping reviews, or narrative reviews) will not be accepted.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
