

Special Issue

Prescription Medication Addiction/Abuse and Public Health Consequences

Message from the Guest Editor

Addictive prescription medications commonly induce psychiatric mental states, suicides, violence, homicides, and medical complications such as lung and heart diseases. Increased legal access to addicting prescription medications has increased diversion and illicit use, not decreased as expected. Expanded legal access to opioid medications and medical marijuana has increased, not decreased, public health problems. For this Special Issue, we invite submissions that examine the prevalence, morbidity, mortality, physician and pharmaceutical practices, public health laws and initiatives, and other aspects of addictive prescription drug abuse and addiction.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
