

Special Issue

Mental Health Care and Promotion

Message from the Guest Editor

Mental health is defined by the World Health Organisation as “*a state of well-being in which every individual realises their potential, can cope with the normal stresses of life, can work productively and fruitfully, and is able to make a contribution to community*”. The achievement of mental health and the prevention and treatment of, and early intervention into, mental health problems and disorders have been identified as public health priorities globally. A broad range of ecological influences impact mental health. Mental health is important throughout the lifespan with interventions implemented in many settings. This Special Issue of the *International Journal of Environmental Research and Public Health* (IJERPH) focuses on mental health care and promotion. We encourage the submission of original research papers, reviews, and case studies that contribute new knowledge in this area. Intervention studies, trials, and epidemiological studies are encouraged. The focus may include a specific population group, setting, or system. We encourage manuscripts that articulate research across the spectrum, including prevention, early intervention, care, and promotion.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
