Special Issue

Mental Health and Disaster: Response, Recovery, and Preparedness for the Future

Message from the Guest Editors

After the occurrence of any major natural or humaninduced disaster, significant impacts on the mental health and psychological status of the, perhaps, thousands of evacuees and/or affected residents often emerge. The Great East Japan Earthquake (GEJE) occurred in March 2011. Subsequently, a massive tsunami and nuclear power plant accident forced the long-term evacuation of thousands of residents. The GEJE is but one of the large-scale disasters which have occurred intermittently and globally, e.g., earthquakes, hurricanes/typhoons, floods, and human-made disasters. Hence, in order to learn lessons and improve preparedness for upcoming disasters, the integration of global and national efforts to support disaster-related mental health activities and research is receiving more attention.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
