

Special Issue

Mental Health Issues from Child to Adult

Message from the Guest Editors

Developmental concepts are emphasized for major mental health issues in childhood, including ADHD and ASD, and it is accepted as a given fact that adverse childhood experiences can alter the developmental trajectory of individuals. Mental health issues have negative impacts on individual, families, and society, and also result in stigma. Much research is underway to uncover the interplay of biological substrates, psychological temperament, and environmental experiences. This Special Issue aims to share and highlight the research findings on various issues experienced from childhood to adulthood. It is not limited to ADHD and ASD, but also includes media exposure, trauma, self-harm, etc.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
