

## Special Issue

# Biological Mosquito Control in Aquatic Ecosystems

### Message from the Guest Editors

This Special Issue aims to present recent work that examines the efficacies of natural enemies in regulating mosquito populations. In particular, we welcome papers that report quantifications of predatory interaction strengths between novel biological control agents and larval mosquitoes in aquatic environments. Furthermore, studies that integrate key environmental contexts that may mediate interactions between mosquitoes and their natural enemies, as well as population-level effects on predators and prey, are most welcome.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
