

## Special Issue

# The Management of Nutrition and Obesity: Second Edition

### Message from the Guest Editor

The development and progression of obesity is a multifaceted issue with a varied etiology. As such, management, mitigation, and prevention of obesity requires a comprehensive approach involving multiple sectors of society. This Special Issue will therefore focus on the development and management of health as pertains to the interplay of policies, systems, and environments that either mitigate or contribute to overall health. The focus of this Issue is to highlight social and food justice, the built environment, and progressive policies and programs that emphasize community and/or public health, entitlement programs, and other social safety nets. Submissions can include any targeted demographic group across the lifespan.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
