

Special Issue

Public Health Effects of Natural and Technological Disasters

Message from the Guest Editor

This Special Edition will provide a forum for publication of rigorous research into the effects of disasters on the public health of affected human populations. Authors are encouraged to submit manuscripts dealing with public health effects of natural disasters, such as hurricanes and earthquakes, but also on technological (man-made) disasters, such as war, terrorism, and industrial accidents. Authors should avoid excessive speculation about developing disasters unless there are new and substantial objective data that provide new insights. Manuscripts about public health changes as a result of specific events such as refugee displacement, civil war, floods, forest fires, and tsunamis, especially if there are new, unpublished data, are particularly welcome.

Guest Editor

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
