# Nursing and Palliative Care

### Message from the Guest Editors

Globally, as many as 100 million people are in need of, and may benefit from, palliative and hospice care across their disease trajectory and at the end of life. Nurses' responsibilities and duties to provide high-quality palliative care are internationally grounded in nurses' codes of ethics. This contributes to their recognized role in delivering holistic patient- and family-centered care. Technological innovations are now rapidly spreading and may promote advancements in nursing care and address palliative and hospice care research priorities identified by nursing associations and research agencies. In recent years, nurses have made significant contributions to palliative and hospice care for patients and their families. They are in pivotal positions that enable them to lead change towards implementing nursing interventions aimed at improving the assessment, diagnosis, and treatment of palliative care needs across diagnoses, disease trajectories, contexts of care, and models of nursing care. Relevant palliative and hospice nursing research approaches and interventions need to be shared to stimulate a better high-quality, evidence-based palliative care practice.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
