

Special Issue

Obstetrics and Gynecology in Public Health

Message from the Guest Editor

Public health is an organized social effort pursued mainly through common activities of public institutions, aimed at improvement, promotion, protection, and restoration of population health. Improving health for all requires expansion of public health interventions to include obstetrics and gynecology. Health problems of women change throughout their lives, they initially concern reproduction, pregnancy, contraception, while in later life menopause, or cancerous diseases. Recently, a new risk has emerged which is COVID-19 pandemic. Correct diagnosis of the problem is the precondition of an effective intervention in issues concerning health of a woman, and also of the foetus. In the area of public health risk assessment concerns health hazards, those resulting from environmental causes, and health behaviours, or other causes, including those congenital. The special issue will deal with the problems of public health related to obstetrics and gynecology. I would like to invite you to contribute a paper for publication in our upcoming Special Issue—Obstetrics and Gynecology in Public Health

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
