Advances in Occupational Health and Safety Management

Message from the Guest Editor

The International Labor Organization (ILO), on World Day for Safety and Health at Work (April 28, 2021), called on countries to implement resilient occupational safety and health (OSH) systems for future health emergencies.

This will require investments in OSH infrastructure and its integration into comprehensive national crisis emergency preparedness and response plans to protect the safety and health of workers and support business continuity. According to the European Agency for Safety and Health at Work (EU-OSHA), work and workplaces are constantly changing. In economically difficult times, it is important to bear in mind that poor occupational safety and health cost money.

Furthermore, several case studies show that there is a direct relationship between good OSH management in the company and improved performance and profitability. This Special Edition aims to include current research topics as well as new concepts, approaches, methods, applications, and empirical findings.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
