Obstructive Sleep Apnea Syndrome: From Symptoms to Treatment

Message from the Guest Editors

Obstructive Sleep Apnea (OSA) is a common disorder estimated in 5%-12% of the adult population. OSA syndrome is characterized by excessive daytime sleepiness and has an increased risk of cardiovascular comorbidities if it is undiagnosed and untreated. The Special Issue is focused on all aspects related to the symptoms, diagnosis and treatment of this pathology. The essential questions this Special Issue will seek to address are:

- Correlation between clinical symptoms and OSA diagnosis
- Different 'phenotypes' of OSA patients
- Correlation between OSA syndrome and other systemic diseases
- Co-morbidity and mortality
- State of the art in diagnostic tests for OSA
- Innovative diagnostic tests
- Sites, levels and patterns of obstruction of the upper respiratory tract in OSAS patients
- Drug induced sleep endoscopy
- Positional Obstructive Sleep Apnea

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
