Health Effects of Occupational and Environmental Exposure

Message from the Guest Editors

Human beings have had to carry out a series of activities for their survival, many of them in the presence of significant risks to their safety and health. The health effects caused by occupational exposure are a cause for concern throughout the world, so it is important to analyze the relationships between work and health, identifying the risk factors that may cause disorders or damage to work health. The study of the safety conditions and use of individual protective equipment (IPE), the exposure to biological and chemical agents, as well as the repetitiveness and intensity of the tasks to be carried out (effort and postural risk, mental health, etc.), in order to achieve optimal worker welfare, are current issues and are of great interest at the public and occupational health levels. We invite colleagues from all health disciplines to submit articles using qualitative, quantitative, or mixed methods approaches.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
