

Special Issue

Older Adults' Health and Wellbeing

Message from the Guest Editors

The prevention of functional decline is the core issue of the health trajectory of many older adults. Understanding the determinants of functional decline is crucial to support active and healthy aging. It is not simply a matter of preventing specific diseases, which is, of course, important, but also preventing and managing transversal factors that are the background of many diseases or negative events. The aim of this Special Issue is to highlight events, processes, or specific situations that can be linked to functional decline, to identify elements that can be included in prevention strategies in the view of increasing active and healthy aging. Innovative approaches that deal with functional decline risk factors are also welcomed.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
