Effectiveness and Safety of High-Dose Opioid Therapy

Message from the Guest Editors

Chronic non-cancer pain is very common in adults, occurring in approximately 20% of the population. The therapeutic use of opioids, especially for pain that is not due to cancer, and the use at high opioid doses, has been the subject of a growing and intense debate. Still, persons in the US and Canada are the highest per capita consumers of opioids globally, and a range of adverse effects and harms have been associated with opioid use, including addiction, overdose, and death. This Special Issue is open to scientific studies that contribute further to this debate by addressing the efficacy and safety of high-dose opioids. This Special Issue will consider the following types of studies: clinical trials, cohort studies, case-control studies, case series, case reports, experimental studies, simulation studies, policy studies, opinion papers, narrative reviews, systematic reviews, and meta-analyses. We look forward to receiving your submissions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
