Special Issue

Optimising Drug Prescribing and Improving Medication Management: What Can We Do?

Message from the Guest Editors

The World Health Organisation (WHO) has referred to non-adherence to medication as "a worldwide problem" of striking magnitude" and "one of the two largest unsolved gaps in health care"; the other being "suboptimal prescription of medication". Medication related morbidity and mortality is a major public health care concern and a significant burden on health care resources. In recent years, there has been an increase in the development and availability of new and efficacious medications with positive benefit-to-risk profiles but there has also been an increase in the use of unnecessary and non-clinically indicated drugs, drug interactions, adherence problems, drug costs and adverse drug events. This Special Issue aims to publish high-quality research and reviews that focus on medication adherence and the identification and prevention of adverse health outcomes and address prescribing quality, safety and effective medication management. Research may be based on any age group, context or setting; including a disease-specific clinical setting or the broader area of population health and health services research.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

Centre for Public Health, Equity and Human Flourishing, Torrens University Australia, Adelaide 5000, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
