Advances in Oral Health and Health Promotion Research

Message from the Guest Editor

Oral health has been recognized as being strongly related to systemic health and overall well-being. The value of integrating oral and general healthcare systems in practice is still developing. A synergy of societal and individual public health campaigns are needed to reduce oral health inequalities. This is important for the prevention of caries and periodontal (gum) disease.

Technology has also become an essential tool for providing more predictable treatment for an optimal oral rehabilitation. Policy makers should take in consideration the hygiene habits, without forgetting about the socioeconomic and socio-psychological determinants of lifestyle and health. In most countries, care-delivery models and financing for oral health are frequently more restricted than for medical care. Indeed, the cost of accessing a dental care provider could be a barrier. Thus, there is a need to improving the affordability of dental care. This special issue of *International Journal of Environmental Research and Public Health* (IJERPH) focuses on the current state of knowledge on the advances in oral health and health promotion research.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
