Oral Health and Care in Children

Message from the Guest Editors

Although dental care technology has generally improved in recent decades, oral diseases still affect a considerable number of children worldwide. Dental caries is the most common noncommunicable disease among children. Those oral diseases and conditions if remain untreated can cause deleterious effects on children. To address the oral health problems in children, dentists, dental researchers and dental public health sectors should understand the oral health situations of children, assess their oral health care needs and develop effective oral health care strategies.

This Special Issue welcomes original research, reviews and case reports (with good quality photos) related to oral health and care in children, which can include but not limited to oral health promotion, assessment or management of the oral health diseases and conditions of children, oral health care strategies and programmes for children, and novel oral health care protocols for children. The oral health care strategies can be considered in both individual and community levels.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
