Research of Orthopaedic and Traumatic Injuries and Surgical Outcomes

Message from the Guest Editor

With the rapidly increasing number of cases of patients who show severe disease patterns or sustain serious injuries, an optimal quality of care may not always be guaranteed. It is all the more important to carry out research in the field of orthopedic diseases and traumatic injuries. Due to the increasing life expectancy and the associated higher level of physical activity, even in old age, surgeons are often required to provide adequate care, especially for geriatric patients, often with osteoporotic bone situation. To provide a high standard of care and lower mortality risks, especially in elderly patients, it is crucial to individually address each patient's needs. One diagnostic aspect that is easily accessed but often underestimated in its importance, is correct and detailed imaging, allowing for the precise planning of treatment strategies and surgical interventions. To lower overall risks for patients, a gold standard for this process should be established. For this purpose, I cordially invite all authors to submit original articles on this topic.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
