

Special Issue

Physical Activity across the Lifespan

Message from the Guest Editors

Physical activity can be divided to different parts, including leisure-time physical activity, occupational physical activity, and commuting physical activity. This Special Issue seeks papers on physical activity across the lifespan, concentrating on papers with longitudinal data or cross-sectional data from different time points and life transitions and life events that have a positive or negative influence on activity, such as the birth of a child or retirement.

- We are especially interested in papers that track physical activity from childhood/adolescence to adulthood or intergenerational transmission of physical activity.
- Additionally, associations of physical activity in lifespan and health problems (e.g., overweight, obesity), symptoms (e.g., hypertension), morbidity or mortality are warmly welcomed.
- Papers that concentrate on special population groups are well accepted.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
