Environmental Contaminants of Emerging Public Health Concern: PFAS

Message from the Guest Editors

While PFAS chemicals have long been in use, our understanding of the mechanisms by which they adversely affect biological systems and the endpoints they alter need elucidation so that risks posed to human and environmental targets can be understood. PFAS present challenges to public health by the sheer number of chemical forms, molecular targets, adverse outcome pathways, and potential developmental or homeostatic impacts. PFAS have now been detected worldwide, including in some of the most pristine environments on Earth and in large percentages of human blood samples from broad populational surveys. Expanding scientific understanding of the molecular targets, adverse outcome pathways, and endpoints would aid in strategies for both PFAS-related regulatory and translational science and in predictive toxicology efforts. In these perspectives, collecting evidence on nuclear receptor interactions, biomolecular cascades, and endpoints detrimental to individual or community health will help to shed light on the challenges presented by these “forever” chemicals.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
MD 21251, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
