The 2nd Edition: The Effects of the Pandemic on Occupational and Environmental Safety

Message from the Guest Editors

The rapid effects of the COVID-19 pandemic on the musculoskeletal system are a result of physical and mental inactivity caused by environmental factors such as social distancing and isolation from nature. The COVID-19 pandemic presents a significant challenge for all organizations. Biological agents may affect occupational safety, while personal protective equipment used during the pandemic may affect the environment. Distance working or online education may impact the mental health of the population. It is therefore essential to study the effects of the pandemic on occupational and environmental safety.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
