

Special Issue

Research in Physical, Social and Intellectual Development in Childhood and Adolescence

Message from the Guest Editors

Due to the possible serious consequences for health as well as the long-term effects on adult life, a detailed description of health problems related to the physical, social, and intellectual development of children and adolescents is essential to achieve a comprehensive understanding of this important stage of growth. Moreover, the identification of environmental factors associated with delays in growth, alterations in neuropsychological development, metabolic problems, and neurodevelopmental disorders, among others, has crucial relevance to provide strong evidence for the health of children and adolescents. This Special Issue will focus on the description of the magnitude of alterations in child and adolescent development such as obesity, adiposity, cardiometabolic risk, sensory processing difficulties, coordination disorders, emotional and behavioral problems, mental and psychomotor problems, and problems affecting their well-being. In addition, we would like to bring together papers dealing with the effect of environmental factors on physical, mental, or social health outcomes. We welcome different types of manuscript submissions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
