Sports Physiotherapy: Treatment for Acute Musculoskeletal Injury and Chronic Diseases

Message from the Guest Editors

Musculoskeletal acute injuries are a usual health problem worldwide. Generally, they occur during physical activity practice or physical daily activities, and they can affect both sexes and all age ranges (i.e., children, adolescents, adults, and the elderly). Early physiotherapy rehabilitation treatments (e.g., Cryotherapy, bandage, lymphatic drainage), could be crucial for an optimal recovery process. On the other side, chronic diseases (e.g., Cancer, cardiovascular diseases, pulmonary diseases, metabolic diseases), needs a holistic approach to improve or maintain the level of health and quality of life of the patient. The physiotherapy interventions (e.g., Manual therapy, exercise programs, range of movement recovery), are an important part of this global treatment focused on the patient as a person. We hope that this Special Issue on “Sports Physiotherapy: Treatment for Acute Musculoskeletal Injury and Chronic Diseases” will be received by physiotherapy researchers as a good chance for publishing their results. We encourage you to send work focused on physiotherapy techniques to improve patients with acute musculoskeletal injuries or chronic diseases.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
