Policies and Strategies in Sexual and Reproductive Health

Message from the Guest Editors

The World Health Organization (WHO) has, as one of its strategic lines of action, sexual and reproductive health (SRH). For this purpose, it carries out a strategic approach to strengthen SRH policies and programs in order to fulfill the ideals of the Millennium Development Goals. In line with this, the WHO has implemented programs, action plans, and strategies on different aspects that are part of the SRH: Global Strategy of the Health Sector against sexually transmitted infections, WHO Recommendations for childbirth care, WHO Maternal Health Program, Recommendations on selected practices for contraceptive use, Responding to intimate partner violence and sexual violence against women, WHO Resolution on female genital mutilation, etc. At present, from different organizations, associations, and scientific societies, an important task is being carried out to adapt the care provided in SRH to care that is marked by scientific evidence and the recommendations based on it.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
