

Special Issue

Research on the Primary Care Services, Patients Safety and Training for Healthcare Professional

Message from the Guest Editor

Primary care services are one of the most crucial elements in healthcare, as described by the World Health Organization. Recently, patient safety in the primary care area has garnered considerable attention from clinicians and researchers, as there is growing recognition that unsafe primary care may lead to increased mortality and the unnecessary use of consultants or healthcare resources due to inappropriate prescription or polypharmacy, poor interprofessional communication and care coordination, and diagnostic errors and delays. However, evidence concerning these areas remains scarce. In particular, factors associated with safety culture in primary care need to be clarified to provide practical solutions in the area. In this Special Issue, we plan to provide an overview of the most recent advances in primary care services and patient safety, focusing on healthcare professional education, burnout, and quality improvement perspectives. Papers addressing these topics, including but not limited to systematic reviews, observational studies, and qualitative research, are invited for submission.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
