

Special Issue

Protective and Risk Factors Associated with Health and Quality of Life Impairment during the COVID-19 Pandemic

Message from the Guest Editor

Recent emerging research is pointing out negative consequences for health and quality of life during the COVID-19 pandemic. Although several social, biological and psychological determinants of these negative consequences have been described, it is important to conduct new research analyzing the interaction of several protective and risk factors, from an integrative biopsychosocial perspective. Hence, this Special Issue is oriented to the publication of different studies, from a variety of areas, which have identified protective and risk factors for health and quality of life impairment in different populations and contexts of interest during the COVID-19 pandemic. The information provided by this Special Issue will allow researchers and clinicians to collect evidence for the development of prevention and intervention programs oriented to health promotion and disease prevention during the pandemic situation.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
