Psychological Implications of the COVID-19 Pandemic, Containment Measures, and Vaccination: From Experimental Data to Practice

Message from the Guest Editors

Understanding the psychological response to the pandemic, to containment measures, and to vaccination is the greatest and more important challenge of this time for the scientific community. Furthermore, both people and institutional actors expect proposals of concrete and practical solutions from the scientific community. Thus, we proposed this Special Issue as a forum for collecting studies on these topics that can bridge data to practical implications, aiming to integrate neuroscientific, experimental, and clinical studies in the field. We welcome original studies that shed light on the psychological aspects of the pandemic response and their consequences on mental health. Studies exploring the psychological causes and implications of vaccine hesitancy or presenting practical and clinical implications on the basis of scientific evidence are also welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
